PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in CI/CD workflows, container orchestration, and cloud infrastructure operations. Skilled in AWS services, Kubernetes environments, and Infrastructure as Code using Terraform. Focused on enhancing release efficiency, maintaining system reliability, and enabling observability across production environments. Strong foundation in Linux administration, networking, and secure system design.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (EC2, S3, IAM, VPC, EBS, Load Balancers)
- **Infrastructure as Code:** Terraform, Ansible
- **CI/CD Tools:** Jenkins, GitHub Actions, GitLab CI
- **Containers & Orchestration:** Docker, Kubernetes (Pods, Deployments, Services, Ingress, ConfigMaps)
- **Monitoring & Logging:** Prometheus, Grafana
- **Operating Systems:** Linux (Ubuntu, Debian, Rocky)
- **Scripting:** Bash, Python
- **Networking:** VPC, Subnets, Security Groups, Nginx, Reverse Proxy, UFW
- **Version Control:** Git, GitHub, GitLab

PROJECTS

CI/CD Pipeline Automation – Jenkins & GitHub Actions Jan 2026

Jenkins | GitHub Actions | Docker | AWS EC2 | Nginx

- Engineered CI/CD pipelines to streamline source integration, testing, and delivery processes for a Node.js application.
- Structured multi-stage workflows with parallel execution, reducing deployment time by 40%.
- Orchestrated Docker image creation, versioning, and registry publishing for consistent artifact management.
- Facilitated application deployment on AWS EC2 through automated pipeline triggers.
- Established an Nginx reverse proxy to efficiently route traffic to containerized services.
- Introduced notification mechanisms to track pipeline outcomes and accelerate issue resolution.

Kubernetes Deployment with Helm Feb 2026

Kubernetes | Helm | Docker | AWS | Nginx

- Orchestrated container workloads within Kubernetes clusters to support scalability and resilience.
- Assembled Helm charts to package Kubernetes configurations for reusable and version-controlled deployments.
- Applied rolling update strategies with rollback capabilities to maintain uninterrupted service availability.
- Provisioned service exposure using Ingress controllers and optimized traffic routing.
- Enhanced cluster efficiency through resource scheduling and scaling strategies.
- Integrated Helm-based releases into CI/CD pipelines for continuous delivery.

Linux Server Hardening & Automation Sep 2025

Ubuntu | Bash | Nginx | Security | UFW

- Strengthened Linux server security by enforcing SSH key-based authentication and eliminating password-based access.
- Enforced firewall policies using UFW to limit exposure to essential network traffic.
- Provisioned secure web hosting with Nginx and SSL certificates via Let's Encrypt.
- Streamlined backup routines using scheduled Bash scripts to ensure data integrity.
- Deployed fail2ban to mitigate brute-force attacks and unauthorized access attempts.
- Optimized system configuration by removing unnecessary services and tightening security controls.

EDUCATION

B.Tech – Computer Science Engineering Sep 2021 – Jul 2025
MallaReddy University CGPA: 8.2/10

Intermediate (MPC) Jun 2019 – Apr 2021
Narayana Junior College Score: 964/1000

SSC May 2019
Akshara High School CGPA: 9.5/10

CERTIFICATIONS

- Programming in Java – NPTEL Sep 2023
- Introduction to Cyber Security – Forage Jan 2025
- Deep Learning – NPTEL May 2024
- Cambridge B2 English Certification – Cambridge Apr 2022
