Summary

Computer Science graduate and Full Stack Developer with 8 months of hands-on experience building and supporting enterprise web applications in an Agile environment. Skilled in developing and troubleshooting REST APIs, writing and optimizing SQL queries, and resolving backend integration issues across Java/Spring Boot systems, with hands-on frontend experience in React.js, HTML5, CSS3, and JavaScript for building responsive, data-driven interfaces. Comfortable working across the full stack from database schema design and backend services to frontend integration with a working foundation in Data Structures. Experienced using AI productivity tools (ChatGPT, Claude) to accelerate development and problem-solving. Strong analytical and communication skills, with an AI-first, adaptable approach to picking up new platforms, domains, and technologies quickly.

Technical Skills

- **Programming Languages:** Java, JavaScript, SQL
- **Backend:** Core Java, Spring Boot, Spring MVC, REST APIs, JPA, JDBC
- **Frontend:** HTML5, CSS3, JavaScript, React.js
- **Database:** MySQL
- **Build & Tools:** Git, GitHub, Eclipse, VS Code, Postman (API testing/debugging), Maven
- **AI Productivity Tools:** ChatGPT, Tabnine, Claude
- **Methodologies:** Agile, Scrum, SDLC, Sprint-based delivery

Work Experience

Virinchi Ltd — September 2025 – May 2026

Trainee Developer — Project: V23 – Healthcare Platform

- Developed and maintained 15+ RESTful APIs using Java and Spring Boot to support authentication, provider verification, approval workflows, and healthcare business processes.
- Designed backend modules and database schemas for healthcare workflows using MySQL and JDBC, enhancing data management and application reliability.
- Provided ongoing application support by testing, debugging, and troubleshooting REST APIs in Postman analysing HTTP requests/responses to identify and resolve backend integration issues.
- Enhanced complex MySQL queries and JDBC operations through query restructuring and indexing techniques, resulting in approximately 20% faster response times.
- Integrated React.js frontend components with Spring Boot REST APIs using Java and MySQL, streamlining data flow and improving overall user experience and development efficiency.
- Collaborated with cross-functional Agile teams using Git for version control, participating in sprint planning, code reviews, testing, and project delivery.

Projects

Event Booking and Management System — January 2025 – May 2025

- Engineered an Event Booking and Management System using Java, Spring Boot, MySQL, React.js, and REST APIs, enabling automated event scheduling, booking, and payment processing.
- Architected RESTful APIs for event management, user authentication, booking, and payment workflows, streamlining transaction processing and system accessibility.
- Streamlined data retrieval by implementing normalized MySQL schemas, pagination, and filtering mechanisms, increasing query performance and reducing response payload size by 40%.
- Accelerated application performance by eliminating redundant database operations and refining API execution logic, reducing response times and maintaining average API latency below 300ms.

Education

Bachelor of Technology in Computer Science and Engineering — September 2021 – May 2025

Malla Reddy University, Hyderabad, India
